# Database Size

Houston

- 225 Signalized Intersections
- 33 Midblock locations

San Antonio

- 225 Signalized Intersections
- 31 Midblock locations

DFW

- 100 Signalized Intersections

Austin

- 75 Signalized Intersections

Total

- 625 Signalized Intersections
- 64 Midblock locations

# Dallas Pedestrian Safety

- Identified Hot Spots:
  - High Risk intersections (on-system)
- High Risk Intersections
  - Signals (19)
  - Stops (23)
- High Risk Intersection Investigations
  - Reviewed Crash Reports
  - Collision Diagrams in Google Earth
  - Developed potential countermeasures

# Negative Binomial Model

## Pedestrian Volume at Signals

- Increases 4 times if in CBD
- 12% increase per school within 1 mile
- Increases 4.8 times per 1% increase in Commercial/MF residential
- Increases 4.7 times with higher education, hospitals, or malls
- 36% decrease per 5mph increase in max. speed limit

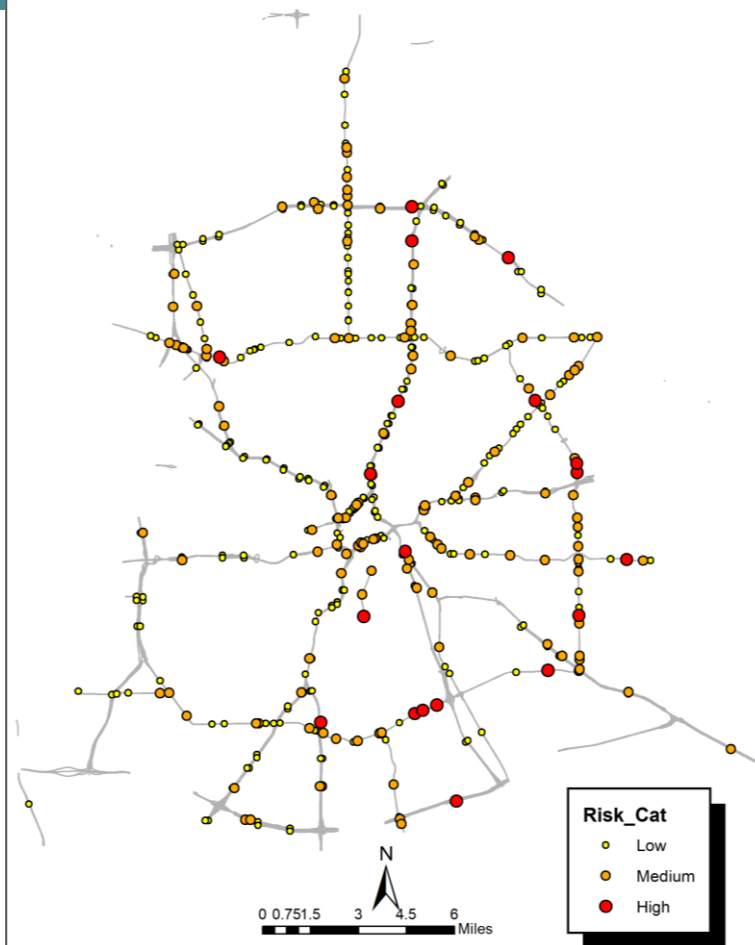

# Safety Performance Function

$$N_{ped} = \exp \left( b_0 + b_{tot} AADT_{tot} + b_{ratio} \frac{AADT_{min}}{AADT_{maj}} + b_{ped} PedVol + b_{cmf} p_{comm+MF} + b_{bus} n_{bus} \right)$$

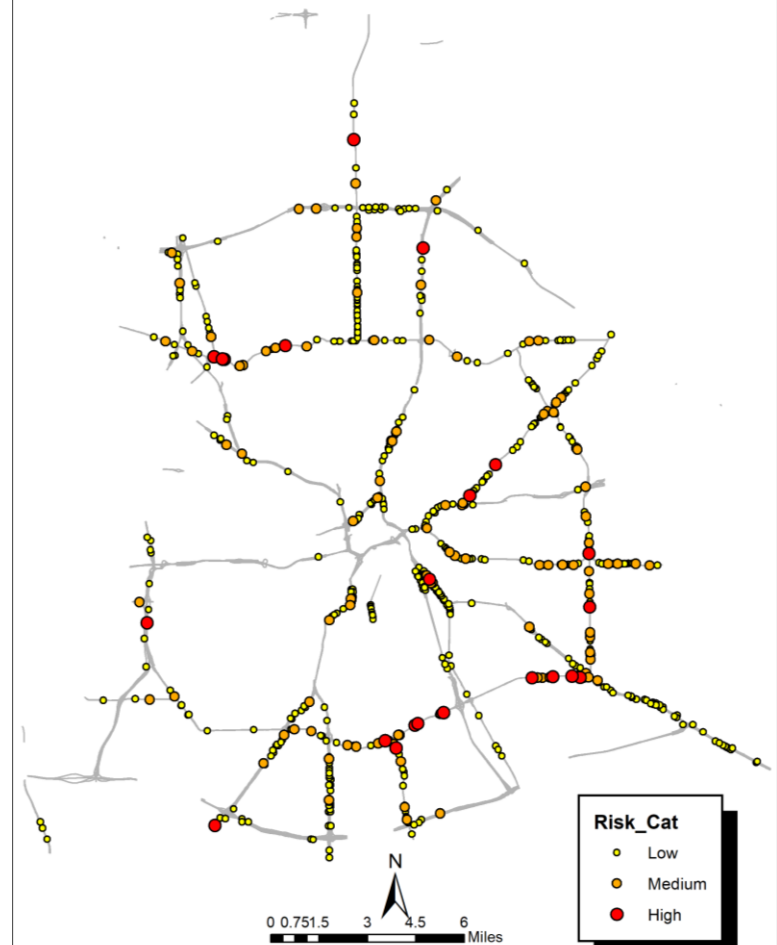

$N_{ped}$	=	Number of pedestrian crashes
$AADT_{tot}$	=	Sum of major street AADT and minor street AADT.
$AADT_{min}$	=	Minor street AADT,
$AADT_{maj}$	=	Major street AADT,
$PedVol$	=	Sum of daily pedestrian volumes (pedestrians/day) crossing all intersection legs,
$p_{comm+MF}$	=	Proportion of commercial and multi-family land use,
$n_{bus}$	=	Number of bus stops within 300ft of the center of the intersection, and
$b_j$	=	calibrated coefficients.

# Dallas Intersections

Dallas Traffic Signal Pedestrian Crashes by Risk Category

Dallas Stop-Controlled Pedestrian Crashes by Risk Category

# LP 12 (NW Hwy), Starlight/Kendale to community

- @ Starlight/Kendale – 14 ped. crashes (1 fatal + 4 incapacitated)
- @ Community – 12 ped. crashes (5 incapacitated)
- Multiple crashes were “dark, not lighted”; consider roadway lighting
- Two crashes involved drivers running up onto the curb and striking pedestrians who were not in the roadway; consider roadway lighting
- The raised median there appears too narrow for a formal refuge area (5 ft. min.); consider providing refuge area
- Sidewalks are not continuous and might contribute to people crossing at places near (but not at) the intersection; consider installing sidewalks

**35 mph zone; consider PHB with advanced markings/signs, Raised Ped Crosswalks**

# LP 12 (Buckner) @ John West

- 11 ped. crashes
- 4 minor ( $\leq 16$ ) ped. crashes and 1 wheelchair
- High pedestrian activity node, comm+ MF housing, elementary & middle school
- High ADT and multiple bus stops
- 40 mph on Buckner; 35 mph on John West

**Consider Leading Ped. Interval, Ext. Ped Phase, Ped Refuge Island/Raised Median on south leg, Auto Ped Detection**

# LP 12 (great trinity) @ jim miller

- 12 ped. crashes
- 2 fatal and 3 incapacitated ped. crashes
- Multiple crashes were “dark, not lighted” and away from intersection
- SF housing
- Sidewalks are not continuous
- 50mph on LP 12 but has a 20mph school zone without proper transition

**Consider Improve Lighting (away from intersection), provide speed transition, sidewalks**

# Corinth @ Morrell Ave.

- 8 ped. crashes (3 incapacitated)
- 3 minor ( $\leq 16$ ) ped. crashes
- Multiple crashes were “dark, not lighted”
- Faded crosswalks (especially west leg)
- Multiple bus stops
- 35mph on Corinth but changes to 40mph at ped. crossing warning beacon on south leg

**Consider Improve Lighting on west leg, High-Viz Ped Crosswalks, Ped Countdown Timer**

# Current work

- SPF for intersection and pedestrian crashes
  - Indicator for city
- Transferability of Pedestrian volume model to other city
- An interactive map where the users can access and visualize the data

# THANK YOU

**Srinivas Reddy Geedipally, Ph.D., P.E.**
